

Declaration of Compliance

Formica® Group, Formica®INFINITI

JIS Z 2801:2010, Japanese Industrial Standard Test for Antimicrobial Activity and Efficacy in Antimicrobial Products

The undersigned hereby declares on behalf of Formica® Group, that when tested to the above standard, Formica®INFINITI products showed antimicrobial activity against *Escherichia coli*, with percent reductions ranging from 92.10% to >99.98% after 24 hours incubation in the JIS Z 2801 test method. This covers all Formica®INFINITI grades, decors and thicknesses.

Antimicrobial activity values ranged from 1.10 to >3.62. Percent reduction and antimicrobial activity were calculated against the untreated glass control at the 24 hour time point.

The JIS Z 2801 method is designed to quantitatively test the ability of plastics and other antimicrobial surfaces to inhibit the growth of microorganisms or kill them, over a 24 hour period of contact.

Signed for and on behalf of the manufacturer by:

Maryana Browne – Certification Officer
